FS Exam Prep — Phase 2 Pack: Play Console, Listing & Privacy

Version · v1.0.2 — 2026-10-24 (question count updated 480 → 1,143 for the seed-20261026 bank; effective when the 0.9.2 swap lands)

For · Phase 2 of the Launch Roadmap v1.0.0. Charlie's hands in Play Console + one PC-agent support prompt (companion file).

State it builds on · Phase 1 repo-side audited PASS: applicationId `com.crieck.prep.fs`, version 0.9.0 / code 2, upload key created and backed up, release AAB built. Family name (D1, decided 2026-10-24): **Benchmark Prep**.

Phase gate · Developer account created and verified; app created in Console; listing + declarations saved as **draft**. Nothing submitted, no release uploaded (that is Phase 3).

⚠️ Publish gate — the Firebase question (decide during this phase)

The listing and policy below claim "no data collection." The app's *features* collect nothing — no accounts, no analytics calls, no server. But the build still bundles unused Firebase / networking libraries (`firebase.bom`, `firebase.ai`, `firebase.appcheck`, OkHttp logging) from the original AI Studio scaffold (roadmap: dependency diet, Phase 5). If those SDKs auto-initialize, Play's Data safety form must say so.

Two clean ways through — Charlie's call, Muse recommends (a):

- **(a) Pull the dependency diet forward.** A short Studio pass removes the unused Firebase/OkHttp/Moshi lines, rebuild, quick re-smoke (S1/S4/S10 only). Then "no data collected" is simply true, the binary shrinks, and Phase 5 loses an item.
- **(b) Declare conservatively now.** Data safety declares what the bundled SDKs may collect (device/other IDs, app interactions), and the policy's analytics sentence is reworded to match. The diet still happens in Phase 5 and the declarations are amended then.

The companion agent prompt includes a merged-manifest scan so the decision is made on evidence (which Firebase providers actually ship in the AAB), not on guesswork. Account creation and the listing can proceed in parallel; only the Data safety form and posting the policy wait on this call.

---

1. Console walkthrough — Charlie's steps, in order

1. **Developer account.** play.google.com/console → sign up as a **personal** account. $25 one-time. Identity verification (government ID) can take days — start it first and let it run. **Public developer name: "Benchmark Test Prep"** (decided 2026-10-24).
2. **Create app.** Name: `Benchmark Prep FS` · Default language: English (United States) · App · Free · Accept the developer declarations. The package `com.crieck.prep.fs` binds when the first AAB uploads (Phase 3) — creating the app now does not require the file.
3. **Play App Signing.** Enrolled by default for new apps. Your Phase 1 key is the *upload* key; Google holds the signing key. Nothing to do until the first upload.
4. **Main store listing** (Grow → Store presence → Main store listing). Paste from §2 of this pack. Upload: 512×512 icon, 1024×500 feature graphic, phone screenshots (the agent prompt assembles these). **Save as draft.**
5. **Privacy policy URL** (Policy → App content). Paste the URL the agent prompt produces from GitHub Pages hosting (§3 text).
6. **App content declarations** (Policy → App content), each a short form:
7. Ads: **No ads.**
8. App access: **All features available without special access** (no login exists to give review credentials for).
9. Content rating: start the questionnaire — category Reference / News / Education; every violence/sex/gambling answer No; expect an Everyone / 3+ outcome.
10. Target audience: **18 and over**; not designed for / not appealing to children.
11. Data safety: **waits on the gate above** — file it after the (a)/(b) call.
12. Government apps: No. Financial features: none. Health: none.
13. **Stop.** Everything saved as draft. Do not create a release, do

not submit for review — Phase 3 uploads the AAB to the internal track.

2. Listing copy (final, paste-ready)

App title (30 chars max)

`Benchmark Prep FS` — 17 chars. (Brand Guide v0.2.6 §1 pattern: `<FamilyName> <EXAM>`.)

Short description (80 chars max)

`FS exam practice: 1,143 questions, full timed mock, spaced review that adapts.` — 76 chars.

Full description

Claim order per Brand Guide §4: diagnostic → bank depth → spaced repetition → worked solutions → offline. No price copy (billing is Phase 5; the testing build is free).

Find your weak areas first, then study what matters.

Benchmark Prep FS starts with a diagnostic that shows where you stand across all 7 Fundamentals of Surveying knowledge areas — so your study time goes to the domains that are actually costing you points, not the ones you already know.

A real bank, and a realistic mock. 1,143 practice questions covering all 7 FS domains, plus a full-length timed mock exam: 110 questions in 5 hours 20 minutes, matching the real exam's shape. Track your readiness, your streak, and your weakest domain from the Today tab.

Review that comes back at the right time. Questions you miss return on a spaced-repetition schedule, so weak topics resurface before you forget them — in short sessions that fit a lunch break or a truck cab.

Worked solutions, not just answer keys. Every question carries a detailed solution you can study step by step, whether you got it right or wrong.

Built for the field: offline, no account, no sign-up. Everything lives on your phone. No account to create, no password, nothing gated — download it and the diagnostic is minutes away. It works where surveyors work, including where there is no signal.

Independent study tool. Not affiliated with or endorsed by NCEES. NCEES, FS, PS, FE, and PE are marks of the National Council of Examiners for Engineering and Surveying.

Listing-time note: re-verify the mark language against current NCEES guidance before submitting anything for review (Brand Guide §4 standing instruction).

3. Privacy policy (final text; two fills remain)

Charlie supplies: the **effective date** at posting. Contact email (decided 2026-10-24): benchmark.test.prep@gmail.com — applied below.

Privacy Policy — Benchmark Prep FS Effective date: [TO FILL AT POSTING]

Benchmark Prep FS ("the app") is an independent study tool for the Fundamentals of Surveying exam. This policy describes what the app does with your information. The short version: the app has no user accounts and does not collect your personal information.

Information we collect None. The app does not ask you to sign up, sign in, or provide a name, email address, or any other personal information, and it does not transmit your study activity to us or to any third party.

Information stored on your device Your progress — answers, scores, streaks, review schedule, and settings — is stored only in the app's private storage on your device. It is removed when you uninstall the app or clear the app's data. We cannot access it, recover it, or restore it for you.

Advertising and analytics The app contains no advertising and no third-party analytics or tracking. [GATE: keep this sentence only if gate option (a) is taken, or the manifest scan under (b) shows the

bundled SDKs never initialize.]

Children The app is designed for adults preparing for a professional licensing exam. It is not directed at children under 13.

Changes to this policy If a future version adds optional features that change how data is handled (for example, optional sign-in and sync), this policy will be updated and the effective date revised before those features ship.

Contact Questions about this policy: benchmark.test.prep@gmail.com

---

4. Listing assets (agent assembles — see companion prompt)

- **Icon, 512×512 PNG:** the decided C3 FS mark (teal #0F766E field, paper benchmark-triangle + FS monogram), exported from the built app's launcher resources.
- **Feature graphic, 1024×500 PNG:** Calm Pro store template — paper #FAFAF8 background, ink headline "Benchmark Prep FS", subline "Fundamentals of Surveying Exam Prep", thin teal rule, benchmark-triangle mark. No screenshots inside it, no device frames.
- **Phone screenshots, minimum 2, target 5:** reuse the Phase 1 smoke-test captures (Today, quiz question, mock, Learn, Progress) at native device resolution; if any look rough, re-capture on device. Play accepts 320–3840px per side; the smoke shots qualify.

5. What this phase does NOT do

No release upload or review submission (Phase 3) · no tester recruitment (Phase 4) · no billing (Phase 5) · no code changes except the gate option (a) diet, which if chosen runs as its own Studio pass with its own audit.
