FS Exam Prep — GUI Phase Studio Prompt v1.0.0 — 2026-10-21

How to use: In the Google AI Studio FS Prep project, paste **Block A** first and let it complete. Then paste **Block B** in the same session. Then sync/push to GitHub once. The full spec is `FS_GUI_Phase_Spec_v1.0.0.pdf` — it is the source of truth if anything here is ambiguous.

BLOCK A — Tab restructure (paste this first)

```
Restructure this app's navigation and home screen to make it feel calm and simple. This is a STRUCTURE-ONLY change: do not remove, disable, or alter any feature, content, question data, scoring logic, or ViewModel behavior. Every existing feature must remain reachable within two taps.
```

```
NON-NEGOTIABLES:
- Do NOT modify QuestionBank.kt, the question-bank loading code, the bank JSON in assets, FsDomain.kt, or the theme files (Color.kt, Type.kt, Theme.kt). The Calm Pro theme tokens, colors, and typography stay exactly as they are.
- Keep the bank error behavior: if the question bank fails to load, the existing BankErrorScreen still replaces the app UI.
- Add NO new dependencies. Implement tabs with the existing navigation state machine and Compose primitives already in the project.
```

```
1. Add a bottom navigation bar with exactly four tabs: Today, Practice, Learn, Progress. The bar is always visible on the four tab screens and hidden during a quiz, mock exam, mock-exam result, or score summary.
```

```
2. TODAY tab (replaces the current all-in-one home screen) — keep it minimal, in this order, nothing else:
   - A short greeting line with the user's handle.
   - One readiness summary card: overall progress percentage, current streak, and daily-goal progress.
   - ONE primary button: "Continue studying" (resumes the most relevant next action) or "Start today's session" if nothing is in progress.
   - A single "Up next" row showing the weakest domain with a Start action that opens that domain's quiz.
   Do not put domain lists, tool grids, achievement previews, leaderboard previews, or settings on this screen.
```

```
3. PRACTICE tab — a simple flat list with dividers, one action per row: the domain quiz list (all 7 domains, one row each, keeping each domain's strength/accuracy display), Adaptive Practice, Mock Exam, and Quiz Configuration.
```

```
4. LEARN tab: Study Guide and Flashcards, one row each.
```

```
5. PROGRESS tab: detailed stats (per-domain breakdown), Achievements, Leaderboard, and completed-module history — one row each, leading to the existing screens, which stay unchanged. Include the existing badges/achievements preview count and leaderboard preview content as rows or summaries on this tab so nothing that was on the old home screen is lost.
```

```
6. Move the theme/appearance picker out of the home screen into a settings gear icon in the top app bar, shown on all four tab screens.
```

```
7. Remove the floating action button — its action (Quiz Configuration) now lives in the Practice tab.
```

```
8. Keep the flat, divider-based list style; do not introduce new card stacks, gradients, or decorative elements.
```

```
9. The quiz, mock exam, mock-exam result, flashcards, study guide, achievements, leaderboard, and score summary screens themselves stay unchanged — only how the user reaches them changes.
```

BLOCK B — De-brand + stale copy (paste after Block A completes, same session)

```
Remove the name "NCEES" from all user-facing text in this app, fix two stale strings on the home screen's mock-exam card, and clean up the project metadata. "NCEES" is a third-party organization's trademark; the app must never appear affiliated with, endorsed by, or sourced from it. There is also no published fixed cut score for the FS exam — never state or imply one.
```

```
Apply these replacements exactly:
- App title "NCEES FS Exam Prep" → "FS Exam Prep"
- "Full-Length NCEES FS Mock Exam" → "Full-Length FS Mock Exam"
- "NCEES FS CBT Simulation" → "FS Exam Simulation"
- Mock-exam result line "Score: X% • You exceeded the NCEES cut score threshold." → "Score: X% • A passing-level performance." (keep the actual score value in place of X%)
- "Performance across all NCEES exam specifications" → "Performance across all FS exam domains"
- Score summary line "Well done! You surpassed the NCEES cut score threshold." → "Well done! A passing-level performance."
- Achievement text "Complete a full timed NCEES FS Mock Exam" → "Complete a full timed FS Mock Exam"
- Code comment "typically >= 70% on NCEES FS" → "typically >= 70% (practice benchmark)"
```

```
Stale mock-exam card copy on the home screen (left over from before the question bank was connected — the mock is now 110 questions over 320 minutes):
- "Timed 90m" → "Timed 5h 20m"
- "32 exam questions covering all 8 domains per official specifications. Includes live countdown timer, question palette, flagging, and domain diagnostic report." → "110 exam questions covering all 7 FS domains. Includes live countdown timer, question palette, flagging, and domain diagnostic report."
```

```
Project metadata (metadata.json):
- Description "NCEES Fundamentals of Surveying (FS) practice questions, domain quizzes, strength & weakness analytics, and detailed problem solutions." → "Fundamentals of Surveying (FS) practice questions, domain quizzes, strength & weakness analytics, and detailed problem solutions."
- Remove the MAJOR_CAPABILITY_SERVER_SIDE_GEMINI_API capability entry — the app does not use any server-side Gemini capability.
```

```
Then add this disclaimer, exactly as written, as a small footer line at the bottom of the Progress tab: "Independent study tool. Not affiliated with or endorsed by NCEES. All questions are original practice material." (This disclaimer is the one place the name may appear — as a non-affiliation statement.)
```

```
Also remove "NCEES" from any remaining code comments. If any other user-facing string contains "NCEES", apply the same pattern: describe the FS exam generically, never use the organization's name as a brand, a question source, or a score authority. Do not change any question content, scoring logic, features, theme files, QuestionBank.kt, the
```

```
bank JSON, or FsDomain.kt in this block.
```

After both blocks: sync/push to GitHub once. Muse will audit the push against the spec's §4 acceptance checks (tabs + reachability, feature inventory, FAB gone, NCEES count zero outside the disclaimer, cut-score claims gone, mock card corrected, disclaimer verbatim, guardrail files untouched) and report pass/fail per item.
